Product Warranty

Enercon Venturi Condensate Removal Unit – The Drilled Venturi:

Enercon Systems Company (“ENERCON”) unconditionally guarantees its drilled venturi condensate removal unit for a period of twenty years, against defects in *material and workmanship, orifice wear, and wire draw* while it is the property of original purchaser. This warranty does not cover the labor, material or other costs related to removal, cleaning or installing of units. If such defects or damages occur to the venturi orifice, ENERCON will replace said venturi orifice free of charge. This warranty covers the *Venturi Condensate Removal Unit only*; not the Y-strainer, blowdown valve or other parts of the ENERCON assembly.

This warranty applies to normal use and not to intentional damage or unreasonable use. *It does not cover cleaning of the units.*

Non Drilled Venturi Unit (No Fabrication Services):

ENERCON shall provide free replacements of defective Y-strainers, blowdown valves or other “non venturi orifice” parts of the ENERCON assembly for a period of one year from the shipment date. This warranty does not cover the labor, material or other costs related to removal, cleaning or installing of them.

Exchange Policy

On new installations, Enercon Systems Company will exchange any units that must be resized to insure proper flow for a period of 12 months at no charge. This exchange policy covers the venturi only. If resizing is needed, Enercon's sole responsibility is to supply an exchange venturi. All original venturi units must be returned.
